

## Quality Assurance Engineer, Software Development

Location: Bellevue; Washington

This person will be a key member of Estorian's product team. This team member will help us port our current Email products to the Dot Net Platform as well as develop new products. This will require testing and coding of the current products as well as the evolving platform products. The successful candidate will have a probationary period of 90 days in order for us to evaluate the individual's ability to work with our existing team and accomplish specific goals. This position will entail a significant amount of time testing existing and new code/systems. We do require certain coding abilities and skills as well as the ability to communicate effectively with the development staff. Maintenance coding will be a substantial part of the working day.

### SUCCESSFUL CANDIDATE DESCRIPTION

- Are you willing to "Invest for Success"?
- Are you a 'world class' Software Test Engineer with developer skills and possess a great knowledge of the .net development platform including C# and SQL Server?
- Are you exceptionally well versed in the testing/development strategies involving SQL Server and Oracle?
- Are you capable of working alone and taking on the challenge of testing/developing & maintaining your own code as well as maintaining others code and "owning it"?
- Are you committed to producing a S/W product that will stand the tests of scalability & efficiency as well as developing the new code that will complete a product that will be introduced and marketed to Fortune 1,000 companies?
- If your answers are "YES" - then we want to talk to you!
- The most important non-technical skills are having an attitude for success and getting the job done, regardless of the obstacles that invariably try to de-rail every project. This is a 24/7 position! If a production problem occurs, it's - **"all-hands-on-deck"!!**
- If you have the desire to be "the tester developer" part of this team that will successfully deliver the best product to hit the market in our sector - then sign on and get ready for an amazing ride. The opportunities are boundless. Our current VB code is being converted to C# and VB.net. The VB testing/coding part of this position will be replaced with C# and VB.net testing/coding. If you are a testing expert with coding experience using VB6, VB.net and C#, - this is your opportunity to 'port' your skills to the .net platform.
- You will have the opportunity to work shoulder to shoulder with the Company founder and visionary of several products that are already successful in the Software marketplace.
- You will also be given the opportunity to provide the majority of the testing in porting the existing VB6 code to the .net platform which will ultimately be C# and VB.net code.
- We do not consider 2nd place a successful outcome - and neither should you!!
- This position will entail a significant amount of time maintaining & testing existing and new (your) code, and being completely responsible for an important software product. This is a small team and each member is critical to the overall success of our mission!!

### REQUIRED SKILLS, EXPERIENCE AND RESPONSIBILITIES

A minimum of 6 years experience with each skill (.Net Platform, VB.Net, VB, C#, Install Shield, Web Services) is required unless otherwise noted:

- Excellent VB6 testing/development experience - development and troubleshooting/testing are required. (6+ years - recent)
- Excellent Microsoft Sql Server database experience required (6+ years)
- Good to very good C# & VB.net coding/testing skills required. (1-2+ years)
- Oracle experience desired
- A solid understand of MS Exchange Server and email technology desired, for development and troubleshooting (1-2 years, basic understanding is desired)
- Database tables, performance and scripting experience are desired
- Languages used will be: VB, C# & VB.Net (Again, VB will be phased out)

- Testing skills required for all skills mentioned
- The successful individual will be required to work well within a team environment as well as operate on their own solving problems and issues and reporting progress to team lead or management. A creative and resourceful problem solver who can code & test successful solutions for real world business tasks are required
- The ability to configure environments, Domains, Forests, Sql Server, Exchange Server, Testing, Search Techniques
- Experience in Software as a Service (SaaS) environments
- Must have experience in all Windows and Microsoft SQL environments
- Bachelor's degree in Computer Science or related field or equivalent experience is required

\* Local candidates only please\*
